Description

Primary care facilities, public hospital beds and hospital activity for every Moroccan province and prefecture from 2003 to 2024, extracted from all 22 editions of the Ministry of Health yearly report Santé en Chiffres, harmonised to current province codes and checked against every national total printed in the reports.

Morocco's Ministry of Health has published a yearly statistical report, *Santé en Chiffres*, since the early 2000s. Its province tables are the only public source on where health facilities and hospital beds are and how they are used, but they are scattered over 22 PDF files whose layout, table numbers and place-name spellings change from one edition to the next. Morocco also created new provinces in 2009 and redrew its regions in 2015.

This dataset puts two decades of those tables into three clean long tables with one code system. Each row names its province, its current region, a comparable unit that stays stable over the whole period, the value, the report page it comes from, and a note when anything was done to it.

Use `unit_2004` to build series that span the 2009 province splits: it groups a province with the provinces later carved out of it, so sums by `unit_2004` are comparable from 2003 to 2024.

GOOD FOR

- Trends in primary care supply and hospital capacity by province over 20 years
- Inequality in health facility and bed density between provinces
- Covariates for ecological studies of health outcomes
- Evaluating health system reforms (2009 provinces, 2015 regions, university hospitals opened since 2014)

NOT GOOD FOR

- Private sector facilities and clinics (not covered by these tables)
- Hospital-level analysis (values are province totals)
- Year-by-year facility counts before 2019 (facilities are reported every two years between 2007 and 2017)

Origin

ORGANISATION	Ministère de la Santé et de la Protection Sociale, Kingdom of Morocco
PUBLICATION	*Santé en Chiffres*
EDITIONS	2003 to 2024 (22 editions, one per data year)
COUNTRY	Morocco
TABLES USED	Primary care facilities (ESSP) by province and setting, and support facilities (public health laboratories, TB centres, reproductive health centres), in every edition. Public hospital beds and activity: one table by province in the 2003-2012 editions, the list of hospitals with province totals in the 2013-2024 editions.

ADDRESS	https://www.sante.gov.ma
ACCESSED	2026-11-02
REUSE TERMS	Publicly released reports. No reuse licence is stated in the reports; HDR publishes the extracted figures with attribution and does not re-host the reports.
HOW OBTAINED	Tables were read from the PDF reports with scripted parsers that use the position of each number on the page. Province and region names, spelled in many ways across editions, were matched to ISO 3166-2:MA codes with a gazetteer. Every edition was checked against the totals the report itself prints (rows, regions, nation). A printed figure was corrected only when the report's own sums prove the error; otherwise it is kept as printed and flagged in the note column.

Files

File	Content	Rows	Cols	Size
`facilities.csv`	One row per reference date, province, indicator, setting and facility type	11,778	13	1.9 MB
`hospitals.csv`	One row per year, province and indicator	7,854	10	1.1 MB
`provinces.csv`	One row per province or prefecture code used in the data files	83	7	6 kB
`ma-health-system-resources.xlsx`	All tables in one workbook, with About and Variables sheets			754 kB

SHA-256 checksums of every file are listed in `manifest.csv` on the landing page.

Variables

`facilities.csv` One row per reference date, province, indicator, setting and facility type

Variable	Type	Description
`code`	string	Province or prefecture code (ISO 3166-2:MA; MA-CAS-xxx for the Casablanca prefectures)
`province`	string	Province or prefecture name
`region_code`	string	Region code, 2015 regional division (12 regions)
`region`	string	Region name, 2015 regional division
`unit_2004`	string	Comparable unit over the whole period: the province plus the provinces carved out of it after 2004 ('+' joined codes); MA-CAS for all Casablanca prefectures
`ref_date`	string	Reference date of the count as printed in the table title (year, or year-month)
`year`	integer	Data year of the report edition the value comes from
`indicator`	string	primary_care_facilities (ESSP network) or support_facilities
`setting`	string	urban, rural or total
`category`	string	Facility type (for example urban health centre level 1, CSU-1), or 'all' for the total of the setting
`value`	integer	Number of facilities
`source`	string	Report edition and page
`note`	string	What was done to the value, if anything (empty when reproduced as printed)

`hospitals.csv` One row per year, province and indicator

Variable	Type	Description
`code`	string	Province or prefecture code (ISO 3166-2:MA)
`province`	string	Province or prefecture name
`region_code`	string	Region code, 2015 regional division
`region`	string	Region name, 2015 regional division
`unit_2004`	string	Comparable unit over the whole period (see facilities.csv)
`year`	integer	Year of activity

`indicator`	string	beds (functional beds), patient_days, admissions, occupancy_rate (%), average_length_of_stay (days)
`value`	number	Value of the indicator; occupancy rate and length of stay are recomputed from the counts
`source`	string	Report edition and page(s)
`note`	string	How the value was chosen when the report disagrees with itself, flags, and formulas for computed indicators

`provinces.csv` One row per province or prefecture code used in the data files

Variable	Type	Description
`code`	string	Province or prefecture code
`name`	string	Name
`type`	string	province, prefecture or prefecture-arrondissements
`region_code`	string	Region code, 2015 regional division
`region`	string	Region name, 2015 regional division
`unit_2004`	string	Comparable unit over the whole period
`unit_2004_members`	string	All codes grouped in the comparable unit (';' separated)

Known issues

Read these before analysis.

1. **Facility counts are not yearly before 2019.** Editions between 2007 and 2017 repeat the table of the previous edition every other year; each count is kept once, under its own reference date (15 dates from 2003 to 2024).
2. **Provinces created in 2009 appear from 2009 or 2011.** Before that, their facilities and beds are counted in the parent province. Use `unit_2004` for series over the whole period.
3. **Provinces without a hospital have no hospital rows** (for example Médiouna and Al Haouz in 2003-2004). Absence means none listed, not missing data: province sums equal the national totals in every year.
4. **Hospital values in 2013-2024 come from hospital lists.** When the list and the printed province total disagree, the value that makes the printed region total add up is kept, and the note says so (9 province-years).
5. **A few printed values look implausible but are consistent with the report's totals**, for example Taroudant 2015 (679 beds, against about 300 in 2014 and 2016). They are kept as printed and flagged as 'isolated spike' in the note (19 province-years).
6. **Patient days or admissions printed as 0 for a hospital with open beds** are set to missing (4 values).
7. **University hospitals (CHU)** are included in the hospital figures of their host prefecture (for example Casablanca-Anfa, Rabat, Fès, Marrakech, Oujda, Tanger), which explains jumps when a CHU opens (Oujda 2015, Tanger 2023).

Checks against the origin

Check	This dataset	Origin	Gap	Result
Equal primary care facilities, province sums vs printed national to-		National row	0	match

tal, all 15 ref- er- ence dates				
Equal after 1 proven correction	Province rows	2 rows off by 1 (2004, printed)	small gap, explained
