HDR DATASET NOTE

Morocco province health panels, 2019-2024

HDR-MA-0001 | version 1.0.0 | 2026-10-25

DOI	Pending, minted at publication
CREATORS	Imad El Badisy
COVERAGE	Morocco
PERIOD	2019 to 2024
UNIT	Province or prefecture, per year
LICENCE	CC BY 4.0
LANDING PAGE	https://elbadisyimad.com/hdr/datasets/ma-province-health-panels/

Description

Notifiable disease cases, public and private health workforce, and target populations for every Moroccan province and prefecture, 2019-2024, extracted from the Ministry of Health annual reports and checked against their printed totals.

Morocco's Ministry of Health publishes a yearly statistical report, *Santé en Chiffres*, as a PDF. Its province-level tables are the most detailed public picture of disease surveillance and health workforce in the country, but they are hard to use: tables change from year to year, blank cells stand for zeros, and place names are spelled inconsistently.

This dataset brings four of those tables for the six editions 2019 to 2024 into clean long-format tables, plus one analysis-ready wide table that joins them.

GOOD FOR

- Ecological studies of disease trends between provinces
- Health workforce inequality and density per 10,000 population
- Rates with population or birth-cohort denominators
- Site selection for health programmes

NOT GOOD FOR

- Comparing the total number of reported diseases before and after 2022 (the list changed)
- Leprosy trends that include 2019 (likely artefact)
- Census-grade population counts (figures are programme targets)

Origin

ORGANISATION	Ministère de la Santé et de la Protection Sociale, Kingdom of Morocco
PUBLICATION	*Santé en Chiffres*
EDITIONS	2019, 2020, 2021, 2022, 2023, 2024
COUNTRY	Morocco
TABLES USED	Communicable diseases (tables 79-84 depending on edition); public doctors by network (table 37); public nurses and technicians by network (tables 39-40); private doctors (tables 41-42); target populations by province.
ADDRESS	https://www.sante.gov.ma
ACCESSED	2026-07-20
REUSE TERMS	Publicly released reports. No reuse licence is stated in the reports; HDR publishes the extracted figures with attribution and does not re-host the reports.
HOW OBTAINED	Tables were extracted from the PDF reports with scripted parsers (position-based column matching for tables where blank cells stand for zero), then province names and region spellings were harmonised.

Files

File	Content	Rows	Cols	Size
merged_panel_wide.csv	One row per province and year: five diseases reported in all years, denominators, workforce totals and rates	450	24	74 kB
pathology_panel_long.csv	One row per year, province and disease (35 disease labels over the period)	8,400	5	459 kB
hr_panel_long.csv	One row per year, province, table and indicator; Casablanca split into 8 prefectures	13,776	6	1.0 MB
population_panel_long.csv	One row per year, province and indicator, urban, rural and total	7,830	5	535 kB
ma-province-health-panels.xlsx	All tables in one workbook, with About and Variables sheets			697 kB

SHA-256 checksums of every file are listed in `manifest.csv` on the landing page.

Variables

merged_panel_wide.csv One row per province and year: five diseases reported in all years, denominators, workforce totals and rates

Variable	Type	Description
year	integer	Calendar year of the report edition
region	string	Health region (12)
province_prefecture	string	Province or prefecture (Casablanca as one unit)
cases_Coqueluche	number	Reported pertussis cases
cases_Lepre	number	Reported leprosy cases
cases_Leptospirose	number	Reported leptospirosis cases
cases_Rougeole	number	Reported measles cases
cases_Tetanos	number	Reported tetanus cases
diseases_reported_total	number	Sum of all diseases reported that year; not comparable between 2019-2021 and 2022-2024
population_totale	number	Total population (programme target)
naissances_attendues	number	Expected births
enfants_moins_1an	number	Children under 1 year
enfants_moins_5ans	number	Children under 5 years
medecins_public_total	number	Public-sector doctors (headcount)
infirmiers_public_total	number	Public-sector nurses and technicians (headcount)
medecins_prive_total	number	Private-sector doctors (headcount)
medecins_public_per_10k_pop	number	Public doctors per 10,000 population
infirmiers_public_per_10k_pop	number	Public nurses and technicians per 10,000 population
medecins_prive_per_10k_pop	number	Private doctors per 10,000 population
cases_Coqueluche_per_100k	number	Pertussis cases per 100,000 population
cases_Lepre_per_100k	number	Leprosy cases per 100,000 population
cases_Leptospirose_per_100k	number	Leptospirosis cases per 100,000 population
cases_Rougeole_per_100k	number	Measles cases per 100,000 population
cases_Tetanos_per_100k	number	Tetanus cases per 100,000 population

pathology_panel_long.csv One row per year, province and disease (35 disease labels over the period)

Variable	Type	Description
year	integer	Calendar year
region	string	Health region
province_prefecture	string	Province or prefecture

`disease`	string	Disease label as printed in the report (French)
`value`	number	Reported cases. A disease absent in a year was not reported that year; it does not mean zero

`hr_panel_long.csv` One row per year, province, table and indicator; Casablanca split into 8 prefectures

Variable	Type	Description
`year`	integer	Calendar year
`region`	string	Health region
`province_prefecture`	string	Province or prefecture (81 units)
`table`	string	medecins_public, infirmiers_public or medecins_prive
`indicator`	string	Prefix gives the care network: rh_ hospitals, ressp_ primary care, rems_ medico-social, prive_ private sector
`value`	number	Headcount

`population_panel_long.csv` One row per year, province and indicator, urban, rural and total

Variable	Type	Description
`year`	integer	Calendar year
`region`	string	Health region
`province_prefecture`	string	Province or prefecture; __REGION_TOTAL__ marks the region's own total row
`indicator`	string	pop_totale, naissances_attendues, enfants_moins_1an, enfants_12_23_mois or enfants_moins_5ans, each with _urbain, _rural or _ensemble
`value`	number	Persons

Known issues

Read these before analysis.

1. **The list of reported diseases changed in 2022.** 2019-2021 reports separate notifiable diseases and diseases under surveillance; 2022-2024 use one surveillance list. COVID-19 appears only in 2022-2023, meningitis only from 2023, rheumatic carditis only until 2021.
2. **Leprosy 2019 is very likely an artefact.** The national rate drops from 37.9 per 100,000 in 2019 to near zero from 2021 and never recovers. Run a sensitivity analysis without 2019.
3. **Food poisoning outbreaks (TIAC) 2020-2021 are approximate.** The source leaves zero cells blank in these years; blanks were read as zeros.
4. **Casablanca has two grains.** Disease and population tables give one unit; the workforce table gives 8 prefectures. The merged file sums them to one unit.
5. **Population figures are programme targets, not census counts.** They are revised between editions (2024 total 36.8 million, lower than 2023 at 37.6 million).
6. **Annex tables differ slightly from headline figures**, typically by about 1%, likely different data cut-off dates. This dataset reproduces the annex tables.

Checks against the origin

Check	This dataset	Origin	Gap	Result
Disease counts, province sums vs regional subtotal rows (all years)	Equal	Subtotal rows	0%	match
Tuberculosis 2023, national total	32,174	32,429 (headline)	0.8%	small gap, explained
Public doctors 2023, national total	14,679	14,510 (headline)	1.2%	small gap, explained
Population, province sums vs national row (all years)	Equal	National row	0%	match
