HDR DATASET NOTE

PAQUID cohort on brain ageing, sample of 2,561

HDR-FR-0001 | version 1.0.0 | 2026-11-11

DOI	Pending, minted at publication
CREATORS	Imad El Badisy
COVERAGE	France
PERIOD	1988 to 2000
UNIT	Person aged 65 and over
LICENCE	CC BY 4.0
LANDING PAGE	https://elbadisyimad.com/hdr/datasets/fr-paquid-dementia-cohort/

Description

A sample of 2,561 people aged 65 and over from PAQUID, a prospective cohort on functional and cerebral ageing started in 1988 in Gironde and Dordogne, south-western France: two cognitive test scores at baseline and time to dementia or to death without dementia over up to 12 years.

A small extract of a landmark French ageing cohort, made public to show how baseline cognitive scores predict dementia when death competes with it.

GOOD FOR

- Teaching competing-risk survival analysis
- Time-dependent ROC curves and AUC with competing risks

NOT GOOD FOR

- Incidence of dementia in France
- Any analysis needing age, sex, education or repeated measures (not included)

Origin

ORGANISATION	PAQUID study group, Inserm and University of Bordeaux
PUBLICATION	*Dartigues JF et al. (1992). The Paquid epidemiological program on brain ageing. Neuroepidemiology 11 (Suppl 1): 14-18*
COUNTRY	France
ADDRESS	https://doi.org/10.1159/000110955
ACCESSED	2026-11-11
REUSE TERMS	Distributed openly for research in the timeROC and riskRegression R packages (GPL-2 or later).
HOW OBTAINED	Taken from the BioBench R package (dataset paquid), which took them from riskRegression::Paquid, first released in the timeROC package.

Files

File	Content	Rows	Cols	Size
`paquid.csv`	One row per participant	2,561	4	46 kB
`fr-paquid-dementia-cohort.xlsx`	All tables in one workbook, with About and Variables sheets			65 kB

SHA-256 checksums of every file are listed in `manifest.csv` on the landing page.

Variables

`paquid.csv` One row per participant

Variable	Type	Description
`time`	number	Years from baseline to dementia, death or censoring
`status`	integer	Event (0 censored, 1 dementia onset, 2 death without dementia)
`DSST`	integer	Digit Symbol Substitution Test score at baseline (attention and psychomotor speed)
`MMSE`	integer	Mini Mental State Examination score at baseline (0 to 30)

Known issues

Read these before analysis.

1. **Demonstration entry.** Taken from the BioBench R package to show how HDR presents a dataset. It has not gone through HDR review and will be removed before launch.
2. **Only four columns.** The sample has no age, sex or other covariates.
3. **Follow-up is censored at 12 years.**
4. **Calendar dates are approximate.** Coverage end is inferred from the 1988 start and 12 years of follow-up.
