Description

Retrospective cohort of 346 patients with colorectal cancer diagnosed and followed at Hassan II University Hospital, Fez, Morocco, between 2009 and 2015: sociodemographic, tumour, molecular and treatment characteristics, delay to start of treatment, and overall survival over 36 months from diagnosis.

One of the few openly available hospital cohorts of colorectal cancer in North Africa. It is suited to survival modelling at 36 months and to the study of delay to start of treatment.

GOOD FOR

- Teaching survival analysis and prognostic modelling
- Comparing Cox models with survival random forests
- Studying delay to start of treatment as an outcome

NOT GOOD FOR

- Population estimates of colorectal cancer survival in Morocco
- Analyses of molecular markers (few tested positive, some missing)

Origin

ORGANISATION	Hassan II University Hospital and Sidi Mohamed Ben Abdellah University, Fez
PUBLICATION	*El Badisy I et al. (2024). Risk factors affecting patients survival with colorectal cancer in Morocco: survival analysis using an interpretable machine learning approach. Scientific Reports 14: 3556*
COUNTRY	Morocco
ADDRESS	https://doi.org/10.1038/s41598-024-51304-3
ACCESSED	2026-11-11
REUSE TERMS	Deposited by the authors on figshare under CC BY 4.0 (doi 10.6084/m9.figshare.21821439); the article is also CC BY 4.0.
HOW OBTAINED	Taken from the BioBench R package (dataset crcfes), which took them from the biostatlab package, which took them from the authors' figshare file dataset_CRC_Fes.csv.

Files

File	Content	Rows	Cols	Size
`colorectal_cancer.csv`	One row per patient	346	19	55 kB
`ma-fez-colorectal-cancer-cohort.xlsx`	All tables in one workbook, with About and Variables sheets			34 kB

SHA-256 checksums of every file are listed in `manifest.csv` on the landing page.

Variables

`colorectal_cancer.csv` One row per patient

Variable	Type	Description
`Age`	integer	Age at diagnosis (years)
`Marital.status`	string	Marital status (Single, Married, Divorced, Widowed)
`Sex`	string	Sex (Female, Male)
`Insurance`	string	Health insurance cover (No, Yes)
`Residency`	string	Area of residence (Rural, Urban)
`Personal.history`	string	Personal history of cancer or colorectal disease (No, Yes)
`Family.history`	string	Family history of cancer (No, Yes)
`Site`	string	Tumour site (Colon, Rectum)
`Subsite`	string	Tumour subsite (Right colon, Transverse colon, Left colon, Superior rectal, Middle rectum, Inferior rectum)
`Surgery`	string	Surgery performed (No, Yes)
`Stage`	string	Stage at diagnosis (Local, Regional, Distant)
`Histological.type`	string	Histological type (Adenocarcinoma lieberkinien, Mucinous adenocarcinoma, Signet ring cell adenocarcinoma)
`Tumor.differentiation`	string	Tumour differentiation (Well, Moderately, Undifferentiated)
`Braf.mutated`	string	BRAF mutation (No, Yes)
`Ras.mutated`	string	RAS mutation (No, Yes)
`MSI.MSS.status`	string	Microsatellite instability (No, Yes)
`time`	integer	Months from diagnosis to death or censoring (at most 36)
`event`	integer	Death (1 dead, 0 censored)
`Delay`	integer	Delay to start of treatment (days)

Known issues

Read these before analysis.

1. **Demonstration entry.** Taken from the BioBench R package to show how HDR presents a dataset. It has not gone through HDR review and will be removed before launch.
2. **Patient count differs in the article.** The abstract reports 343 patients; the results section and this file have 346.
3. **Follow-up is capped at 36 months** from diagnosis.
4. **Some values are missing**: Delay (10), MSI.MSS.status (16), Braf.mutated and Ras.mutated (12 each), Histological.type (1).
5. **Braf.mutated has no positive case.**
